

Hey guys, I have created a table for naming conventions as you can see below. This is to make it easier for everyone to code using universal variable names. This list is not exhaustive or permanent, but it is a good way to start. As we progress through this project there will be more variable names in the table. Please make sure that all the following variable names are used correspondingly in your code and the HTML POST names are given the same names so that when we merge our work, there will be nothing lost in translation. Let me know if anyone has any suggestions.

<u>Value</u>	<u>Variable name and POST name</u>
User Name	userName
First Name	firstName
Last Name	lastName
Phone Number	phoneNum
SSN	ssn
Address	address
Password	password
Re-enter Password	rePassword
Email	email
Account Number	accNum
Re-enter Account Number	reAccNum
Account Nickname	accNick
Authorized User	authUser
Date Opened	dateOpened
Account Use	accUse
Account Type	accType
Routing Number	rtn
Re-enter Routing Number	reRtn
Payment Recipient	recipient
Recipient Account Number	recipientAccNum
Recipient name (Personal or Business)	recipientName
Payment Amount	payAmount
Payment Type ('Single' or 'Recurring')	payType
if Payment type == 'Recurring' ('daily', 'weekly', 'bi weekly', 'monthly', or custom schedule)	paySchedule
